

**10 CSR 10-2.320 Control of Emissions from Production of
Pesticides and Herbicides**

(1) Applicability.

(A) This rule shall apply throughout Clay, Jackson and Platte Counties.

(B) This rule shall apply to any pesticide or herbicide manufacturing installation with an uncontrolled potential to emit equal to or greater than two hundred fifty (250) kilograms per day or one hundred (100) tons per year of volatile organic compounds (VOC). This rule shall also apply to any installation which does not have an allowable VOC emission limit established under 10 CSR 10-6.060 or legally enforceable state implementation plan revision and which has uncontrolled potential emissions greater than or equal to two hundred fifty (250) kilograms per day or one hundred (100) tons per year of VOC. The uncontrolled potential to emit is the potential emissions (as defined) plus the emissions removed by control devices.

(C) This rule does not apply to source operations used exclusively for chemical or physical analysis of determinations of product quality and commercial acceptance (such as pilot plant operations and laboratories) unless the operation is an integral part of the production process.

(2) Definitions of certain terms specified in this rule may be found in 10 CSR 10-6.020.

(3) General Provisions. All source operations in installations affected by this rule that are venting emissions to VOC emission control devices as of November 23, 1987 shall be required to continue venting emissions to these control devices and these emissions shall be controlled to the extent required in section (4) of this rule.

(4) Emissions Limitations. Any pesticide or herbicide manufacturing installation VOC emissions control device subject to this rule must achieve an instantaneous VOC destruction or removal efficiency greater than or equal to ninety-nine percent (99%).

(5) Recordkeeping.

(A) Owners or operators utilizing thermal oxidizers as control technology must maintain adequate records of the combustion chamber temperature and residence time to determine the VOC control compliance. Also, the owners or operators must

maintain records of routine or unscheduled maintenance and repairs of the thermal oxidizers. The director may require any other records of operating parameters as may be necessary to determine compliance.

(B) Owners or operators using other control technology shall maintain records of all operating parameters and of routine or unscheduled maintenance and repairs of air pollution control equipment as may be required by the director to determine compliance.

(C) Records of all information required in (4)(A) and (B) shall be kept for a period of not less than two (2) years and all such records shall be made available to the director upon his request.

(6) Compliance Method.

(A) For any control technology employed to comply with this rule, compliance shall be determined by the test methods referenced in 10 CSR 10-6.030(14)(A) for volatile organic compounds.

(B) For thermal oxidizers, compliance shall also be determined by the combustion chamber temperature and residence time after adequate test results, as determined by the director, are provided by the owners or operators. These test results shall be subject to periodic confirmation at the discretion of the director. Combustion chamber gas temperature shall be monitored with an accuracy of the greater of + or - 0.75% of the temperature being measured expressed in degrees Celsius, or 2.5 degrees Celsius.

(7) Compliance Date. Compliance with this rule by any installation subject to this rule shall occur no later than November 23, 1987.
